cendoor

THE COMPLETE OVERVIEW

You post.
Cendoor does the rest.

An AI shop builder and order-automation service for small Moroccan sellers who sell on Instagram, TikTok and WhatsApp. It builds the shop, answers customers, takes and confirms orders, tracks deliveries and cash, and sends targeted offers and ads.

Status working product, tested on demo data; no real sellers yet **Founder** name

Contact email / WhatsApp **Version** October 2026

1 · In one page

What Cendoor is, and where it stands

A small seller in Morocco posts a reel, gets orders by DM, then loses evenings confirming them by phone, and loses money when cash-on-delivery parcels are refused. Cendoor takes over that work.

The problem

Sellers on Instagram, TikTok and WhatsApp take most orders by message and most payments in cash on delivery. They answer the same questions all day, phone customers to confirm, chase carriers, and have no simple shop. Orders that go silent or get refused cost them stock, shipping and time. (Published failure rates of 20% to over 50% come from vendors who sell confirmation tools, not from independent data.)

The solution

One link in the seller's bio opens a shop designed for them. A customer chat in Darija, French, Arabic or English takes the order. An AI agent confirms it with the customer before the seller ships. Delivery and cash are tracked, and the seller can send offers and launch ads from a button. **The seller makes content and ships the parcel; Cendoor does the rest.**

3
languages for the site and dashboard: Arabic, French, English. The AI also understands Darija.

149 MAD
per month, Solo plan, after a 14-day free trial (Growth 299 MAD)

119
automated checks pass on the demo product

0
real sellers so far. The next step is a 30-day pilot.

Honest summary. The product works end to end on demo data. Connecting WhatsApp, Instagram, TikTok, Meta ads, carriers and billing needs approvals or partners that are not in place yet. There are no customers and no revenue. This document says which parts are live, simulated, waiting for approval or only planned.

2 · The journey

From a post to a delivered order

Eight steps. The seller does the first and the last; the middle is automated.

1 **The seller posts**
A reel, story or status with the Cendoor link in the bio.

2 **The customer opens the shop**
A photo-led shop made for this seller, on any phone, in three languages.

3 **The customer orders**
By quick form or by chatting, in Darija, French, Arabic or English.

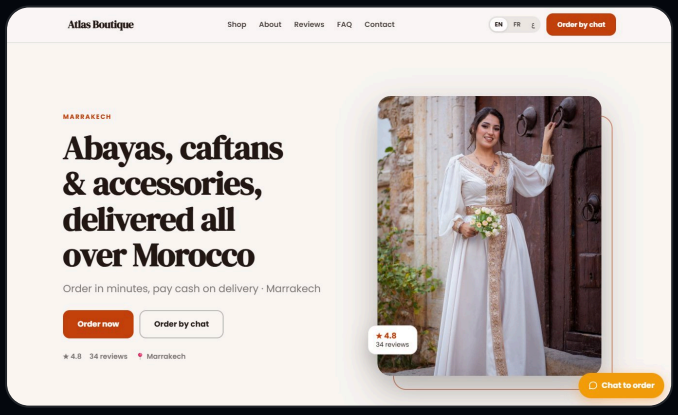

4 **The AI confirms**
It messages the customer to confirm; a risk check flags doubtful orders for the seller.

5 **The seller approves and ships**
Label, carrier suggestion and stock update. The seller sees one list of tasks.

6 **The customer is kept informed**
Status messages and a tracking page; failed deliveries trigger a recovery message.

7 **Cash is tracked**
Which carrier delivered, which cash has been paid back to the seller.

8 **The seller sells again**
Targeted offers to past customers and ads launched from a button, each with a tracked link.

The customer's shop (demo shop "Atlas Boutique"). Every shop is generated for its seller.

The same shop on a phone.

3 · The product

What each part does

The dashboard has seven entries: Home, Studio, Orders, Inbox, Products, Customers, Settings. It is dark by default with an optional light mode.

AI shop builder and Studio — Live in demo

- Each shop is generated from a description: layout, colours, fonts, photos, sections.
- The Studio is a chat: "make it dark with gold", "add an About section", "price of oud perfume 250".
- Undo for every change; photo upload for logo, hero, products.
- New sellers get category starter photos and sample products.
- Free-form Claude-written pages cost credits and have **not yet been run with a real key**. Untested

Customer chat and orders — Live in demo

- Takes an order from start to finish: product, variant, name, phone, city, address.
- Understands Darija, Arabizi, French, Arabic, English, Moroccan cities and phone formats.
- Complaints are handed to the seller instead of answered by the bot.
- The seller can take over any conversation.

Confirmation and risk — Live in demo

- Orders wait for the customer's "yes" before shipping.
- A risk check (new customer, short address, past failures) marks orders green or red.
- The seller approves the doubtful ones.
- Cross-seller risk signal on hashed phone numbers: needs many sellers

Shipping, tracking and cash — Simulated

- Carrier suggestion by city and price (Amana, CTM, Aramex, CashPlus in the demo).
- Customer tracking page with order number and phone.
- Cash-on-delivery tracking and a carrier performance table.
- Real carrier tracking needs carrier contracts.

Inbox — Needs approval for live channels

- One list for web, WhatsApp, Instagram and TikTok conversations, with "needs you" flags.
- Works in the demo; WhatsApp sending needs Meta business verification and approved templates; Instagram and TikTok inboxes need platform access.
- Until then, messages are queued with a one-tap WhatsApp link.

Customers and campaigns — Live in demo

- Pick an audience by city, products, spend, orders, recency, channel; or use a quick audience (VIP, recent, win-back).
- Write or generate the message; preview it for a real customer; confirm.
- Safeguards: opt-out, 3 campaigns a day, 500 recipients, rate limit.
- Each campaign has a tracked link with visits, orders and revenue.

Ads from a button

Dry run until approved

- The seller connects their own Meta ad account, picks a product, gets ad copy and sets a budget (20 to 300 MAD a day, max 14 days).
- Cendoor creates campaign, ad set, creative and ad; the seller pays Meta directly.
- The report counts delivered orders against the money spent.
- Other sellers' accounts need Meta app review and business verification; TikTok ads are not built.

Post links and advice

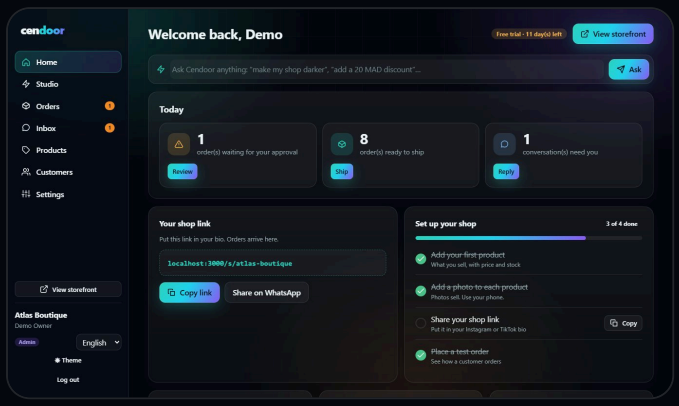

Live in demo

- One tracked link per reel or story with visits and revenue.
- Caption generator.
- Copilot: stock runway, best post, customers to win back, carrier problems, failure rate.
- Roles for a small team: admin, manager, operator, viewer.

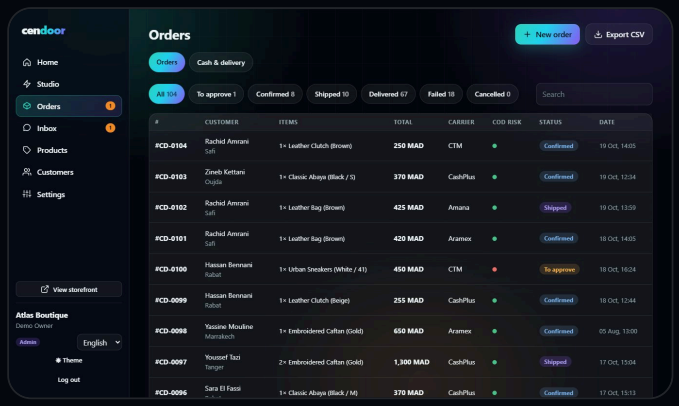

4 · Screens

The dashboard, as it looks today

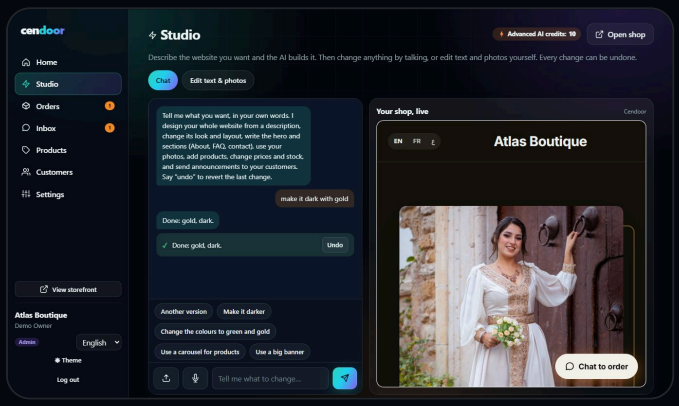

Real screenshots from the demo (fictional shop and customers).

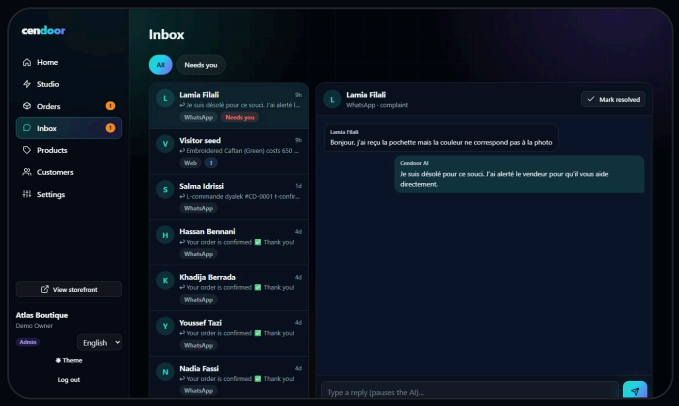

Home: what needs the seller today, the shop link, setup checklist.

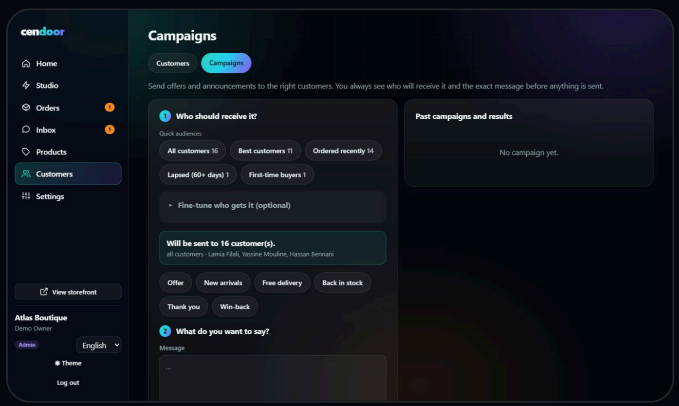

Orders: status filters, risk dot, carrier.

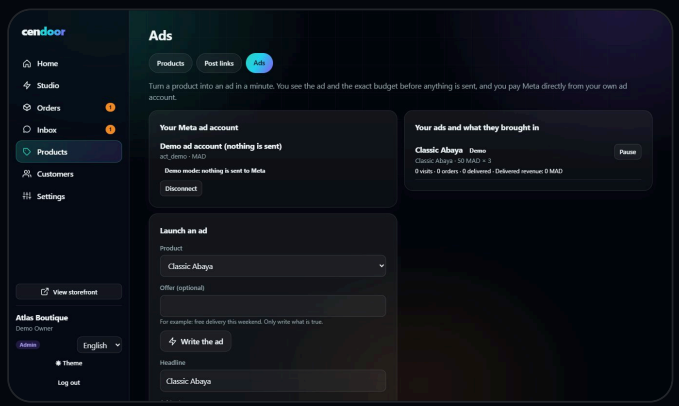

Studio: change the shop by chatting.

Inbox: the AI's conversation with a customer in Darija.

Campaigns: who gets the message, with a live count.

Ads: a launched demo ad and its report.

5 · Market

Who it is for, and how big that is

The customer is a seller who takes orders by DM or link on Instagram, TikTok or WhatsApp, mostly cash on delivery, with 10 or more orders a month: fashion, beauty, perfume, food, home goods.

SOURCED ANCHOR	FIGURE	SOURCE
Internet users, Morocco	35.5 million (92%), end 2025	DataReportal, Digital 2026
Social media identities	22.8 million (Oct 2025)	DataReportal
Card payments 2024	215 M transactions; 44 M e-commerce	CMI, as reported
E-commerce revenue	about $1.6–1.7 billion	Statista projection, reported by Moroccan press
Auto-entrepreneurs registered	463,383 (end 2025)	DGI, via TelQuel
Cash on delivery share	70–90% of orders	**Vendor claims**, not independent
Count of social-media sellers	**not found**	No official source exists that we could locate

BOTTOM-UP ESTIMATE (ASSUMPTIONS)	LOW	BASE	HIGH
TAM: social and messaging sellers in Morocco	50,000	100,000	150,000
SAM: regular, cash-on-delivery, would pay (30%)	15,000	30,000	45,000
SOM in 3 years (3–5% of SAM)	450	1,200	2,250
Annual revenue at 149 MAD (MAD)	0.8 M	2.15 M	4.0 M

Read this carefully. The sizes above are assumptions to be replaced by a survey of 100 sellers. On these numbers Morocco alone supports a small, real business (about $400k a year in the high case), not a large one. A bigger outcome needs more revenue per seller (per-order fees, payment float, ad margin, carrier commissions), similar cash-on-delivery markets, or a larger seller base than assumed. Each of those still has to be shown.

6 · Business model

Pricing and the numbers

Free trial

14 days, no card. Basic shop customisation is free and unlimited. 10 AI credits for advanced pages.

Solo

149 MAD / month. Shop, chat, confirmation, tracking, campaigns. Extra AI credits bought separately.

Growth

299 MAD / month. Team seats and 100 AI credits.

Founding 50 offer (planned): the first 50 sellers lock 99 MAD a month for 12 months, with a refund of the month if no real order is confirmed in 30 days. A pay-per-confirmed-order option (about 4 MAD) is under consideration and not yet modelled. Billing is not connected yet.

ESTIMATES (MAD, NO FOUNDER PAY INCLUDED)	
Contribution per paying seller	about 126 MAD / month (85%)
Break-even	24 paying sellers (39 at 99 MAD)
Year 1, 60 paying sellers by month 12	operating profit about +3,500
Startup spend	about 19,000 (company, legal, WhatsApp access, launch)
Cash needed before it pays for itself	about 29,800
Running costs	about 23 per seller (hosting, messages) plus about 940 a month fixed; about 2,000 a month marketing

These are projections, built in a spreadsheet with live formulas (`financial-model.xlsx`), with cost estimates that have no supplier quotes. The margin is narrow, which is why the first goal is a pilot with real sellers.

7 · Competition and evidence

Who else is here, and what we know

COMPETITOR (PUBLIC PAGES)	WHAT THEY OFFER
eGrow	Order confirmation for cash-on-delivery sellers, from about $59 a month; claims 200+ stores
YouCan (with YouCan Confirm)	A store builder with confirmation tools, popular in Morocco
Babliy	Darija AI on WhatsApp, launched June 2026

Cendoor is priced below the priced competitors, and combines shop, chat, confirmation, tracking and campaigns for the seller who has **no store yet and sells through Instagram**. That open lane is our inference and needs testing; competitor information comes from vendors' own pages.

Simulated sellers (not real customers)

In a role-played panel of 20 sellers, 2 would buy the plain 149 MAD pitch and 5 the Founding 50 offer. 8 of 15 who declined cited trust. This is an upper bound and says nothing about real behaviour.

Board review

Three simulated reviewers averaged 4.7 out of 10 and asked for 5 to 20 real sellers with measured results before more building. The roadmap follows that advice.

8 · Roadmap

What happens next

One sharp thing first: getting cash-on-delivery orders confirmed and delivered for small sellers. Dates are targets, and each stage ends with a check with real sellers.

STAGE	WHAT	DONE WHEN
1 · Prove it weeks 0–6	Approve-before-send mode, customer data export, per-shop kill switch, one real path (order, confirmation, delivery status), 3 to 10 pilot sellers, test the Claude pages with a real key, register the company, lawyer review, data-protection (CNDP) step	3+ sellers confirm 10+ real orders each and commit in writing to pay
2 · Reliable and billable months 2–4	WhatsApp Business verification and message templates, billing, one or two carrier integrations, backups and monitoring, Founding 50 launch	Paying sellers on real WhatsApp
3 · Grow months 4–8	Meta ads connection for other sellers, referral loop, Darija voice-note transcription, team seats	Referral-driven growth
4 · Widen months 8–12	Instagram and TikTok inboxes if approved, support hire, per-order fees and other revenue, study a similar market	Evidence from Morocco first

Deliberately not now: TikTok ads automation, a marketplace or buyer app, anything that adds a new product before Stage 1 is met.

9 · Honest status

What works, what waits, what is missing

AREA	STATUS	DETAIL
Shop builder, Studio, chat, orders, confirmation, risk, campaigns, post links, copilot, roles	Live in demo	Built and tested on demo data (119 automated checks)
WhatsApp sending, Instagram and TikTok inboxes	Needs approval	Meta business verification, approved templates, platform access
Meta ads for other sellers	Needs approval	Dry run only; never run against Meta's live servers
Carrier tracking	Simulated	Needs carrier API contracts
Claude-written pages and free-form Studio	Untested live	Needs an API key and real-output review
Billing, credits purchase	Planned	Not connected
Approve-before-send, customer export, kill switch, per-order plan	Planned	Stage 1 of the roadmap
Darija voice notes to text	Planned	Evaluate before building

Security and data

- Ad-account tokens stored encrypted (AES-256-GCM).
- Shop pages are sanitised so generated code cannot run unsafe scripts.
- Roles limit what team members can do; customers can opt out of messages with STOP.
- Cross-seller risk signals use hashed phone numbers only.
- No external security audit yet; self-description only.

Legal and company

- Customer data and marketing messages fall under Moroccan Law 09-08 (CNDP). Terms, privacy policy and data-processing texts are **drafts that need a Moroccan lawyer**.
- The company is not registered yet, so there is no cap table, bank account or contracts.
- Product photos in the demo come from Pexels and from the founder; sellers upload their own.

The five gaps an informed reader will notice: no customers or revenue; no registered company; team page not written; key integrations not live; no external security review and legal texts in draft. We name them first.

10 · The next step

What we are looking for

Introductions

Ten Moroccan sellers who confirm cash-on-delivery orders by hand today, willing to run Cendoor for 30 days alongside their usual process.

Runway

About 29,800 MAD plus a living income for the founder to run the pilot (3 to 10 sellers), then a written commitment to pay 99 MAD a month from at least 3 of them. Founder to confirm amount and terms

See it yourself

WHERE	WHAT YOU SEE
Demo link add link	Landing page, demo shop, dashboard (press "Try the demo"), and the page "How it works" with every feature and its status
